### **Symptom (public)**

When a new station is generated in AQUi, a new station Eol code is generated. Countries which do not use AQUi have to define the code themselves.

### **Problem (public)**

Question from NO: We have a few new measurement stations in our network and I have a question regarding Eol codes. When we used the DEM for reporting data we got Eol codes for new stations from the DEM. Now with the new e-reporting implemented, how do I get the Eol codes for the new stations?

### **Solution (public)**

If you added a new station, the DEM generates a new Eol station code. This code was simply according to the format NO\*\*\*\*A, where \*\*\*\* is a sequence number. So, take the highest number until now (e.g. NO0098A) and continue with NO0099A, NO0100A, etc.
